

MEAN

The mean is the average value of a data set calculated by summing all data points and dividing by the total count

Calculation

Mean = sum of values / number of values

2,4,4,5,5 for the data set

$$= 2 + 4 + 4 + 5 + 5 \div 5$$

$$= 20 \div 5$$

$$= 4$$

MODE

The mode is the value that appears most frequently in a data set serving as a measure of central tendency. A dataset can have one mode, multiple modes, or no mode if all values are unique.

Example {2,4,4,6,2,2,8}

The mode is 2

Median

The Median value in an ordered dataset separating the higher half from the lower half.

Example 2,3,5,7,11

Since there are 5 numbers the middle value is 5
